

Mental arithmetic

A

Join each number with the right square.

B

Complete the equations.  
If you aren't sure, draw on your slate or on your rough book.

$$10 + 10 + 10 + 6 = \dots\dots$$

$$10 + 10 + 6 = \dots\dots$$

$$10 + 6 = \dots\dots$$

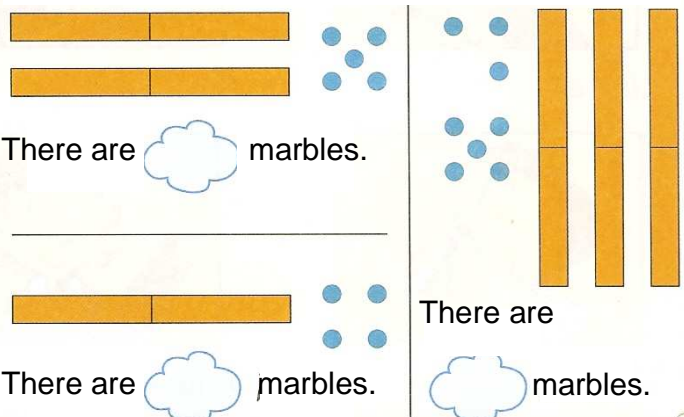

$$10 + 8 = \dots\dots$$

$$10 + 9 = \dots\dots$$

$$10 + 10 = \dots\dots$$

C

Imagine the marbles in the boxes and answer in the small clouds.

D

Calculate as Dédé and Pickmarble do.  
If you aren't sure, draw on your slate or on your rough book.

$$5 + 6 = \dots\dots \quad 7 + 5 = \dots\dots$$

$$8 + 5 = \dots\dots \quad 5 + 9 = \dots\dots$$

E

Calculate.

$$9 - 2 = \dots\dots \quad 10 - 8 = \dots\dots$$

$$10 - 3 = \dots\dots \quad 8 - 6 = \dots\dots$$

$$8 - 2 = \dots\dots \quad 6 - 4 = \dots\dots$$

F

A. Mental arithmetic: addition equations such as  $5+n$  or  $n+5$  (for  $n \leq 9$ ). The teacher says for example: "8+5, imagine 8 as Dédé... 8+5, write down the result..."  
B. Use the landmarks 10, 20, 30 to find a given number on the number line; when they do so, learners need not recount from the first square.
